

Machine Setter/Maintenance Fitter/Jig Maker/First-Off Controller

Location: Dandenong South

A permanent, full time position exists for a Machine Setter/Maintenance Fitter/Jig Maker/First-Off Controller for a leading, well respected engineering company located in the Dandenong South area.

Duties for this position include but not limited to the following:

- Support to machine operators in setting up production processes including:
 - CNC Mandrel Benders, Automatic saws, Welding, Section Rollers and Presses
- First-off setting up
- Quality Inspections, In Process, Final Inspection and PPAP
- Machinery maintenance and upgrades
- Design and modify tooling, jigs & fixtures

Qualifications required for this position include but not limited to the following:

- Trade Qualification in Fitting & Turning/Maintenance Fitter or Fitter/Welder
- Quality Control training
- Ability to read engineering drawings
- Basic machining skills (mill & lathe)
- Forklift and Crane Chasers licence

Attributes and Attitude:

- Lead by example in a team environment
- Logical approach
- An eye for detail
- Excellent communication skills
- Set and maintain high quality standards at all stages of production: First-off, in-process and final inspection processes
- Total commitment to customer satisfaction
- Total commitment to quality
- Total commitment to profitability

This is a hands-on position in a fast paced, innovative and progressive environment where the Customer is King and delivering in full and on time is paramount to our Customers' success. The primary objective of this role is to get it right the first time, maintain the quality standards and set the pace for the production operators. Much of our work is small to medium size production runs interspersed with prototyping and short runs.

This role is Permanent/Full time position after the appropriate qualifying period- 38 hours (Monday to Friday)
